Neo AI — Web Interface Setup

Complete web interface package for Neo AI with streaming, voice input, and desktop app support.

Files

File	Purpose
`neo_chat.html`	Web chat UI (single file, no build step)
`launcher_integrated.py`	Unified launcher with embedded API server
`neo_desktop.py`	PyWebView desktop app launcher

Quick Start

1. Install Dependencies

```
pip install flask flask-cors pywebview
```

2. Place Files

Put these files in your Neo project root (`TRAININGBOT2/`):

```
TRAININGBOT2/
├── launcher.py                    # Your existing launcher (or use launcher_integrated.py)
├── fundibrain.py                  # Already fixed
├── core/
│   ├── local_llm.py              # Already fixed
│   ├── llm_router.py             # Already fixed
│   ├── orchestrator.py           # Already fixed
│   └── plugins/
├── neo_chat.html                  # NEW — Web UI
├── launcher_integrated.py         # NEW — Optional unified launcher
├── neo_desktop.py                 # NEW — Desktop app launcher
└── .env
```

3. Run Modes

Option A: CLI + Web UI (Recommended)

```
# Terminal 1: Start Neo with API server
python launcher.py

# Then open browser to:
# http://127.0.0.1:8000/
```

Option B: Web UI Only

```
python launcher.py --web
# Automatically opens browser
```

Generated by Kimi.ai

Option C: Desktop App

```
pip install pywebview
python neo_desktop.py
# Or use the integrated launcher:
python launcher_integrated.py --desktop
```

Option D: API Server Only

```
python launcher.py --server
# API runs at http://127.0.0.1:8000/
```

Features

Feature	Status	Notes
Dark theme UI	✅	ChatGPT/Claude quality design
Streaming responses	✅	Token-by-token with SSE
Voice input	✅	Web Speech API (Chrome/Edge)
Message history	✅	Persistent in localStorage
Model badges	✅	Shows which LLM answered
Code formatting	✅	Auto-detects code blocks
Mobile responsive	✅	Collapsible sidebar
Keyboard shortcuts	✅	Ctrl+N new chat, Ctrl+D debug
Desktop app	✅	PyWebView native window
Health check	✅	Auto-detects API status

Keyboard Shortcuts

Shortcut	Action
`Enter`	Send message
`Shift+Enter`	New line in input
`Ctrl+N`	New chat
`Ctrl+D`	Toggle debug mode
`Ctrl+Shift+V`	Toggle voice input

API Endpoints

Endpoint	Method	Description
`GET /`	—	Serves chat UI
`GET /api/health`	—	Health check
`POST /api/chat`	JSON	Chat (set `stream: true` for SSE)

Generated by Kimi.ai

Table 4 – continued

Endpoint	Method	Description
`POST /api/agent`	JSON	Agent mode
`POST /api/research`	JSON	Tavily research
`POST /api/voice`	JSON	Voice transcript → response
`GET /api/stats`	—	System stats
`GET /api/models`	—	Available models

Customization

Change API URL

```
// In browser console
localStorage.setItem('neo_api_url', 'http://192.168.1.100:8000/api/chat')
```

Disable Streaming

```
localStorage.setItem('neo_stream_mode', 'false')
```

Troubleshooting

Issue	Fix
`Flask not installed`	`pip install flask flask-cors`
`PyWebView not installed`	`pip install pywebview`
`Voice not working`	Use Chrome/Edge. Firefox doesn’ t support Web Speech API
`API not reachable`	Ensure `launcher.py` is running. Check firewall
`CORS errors`	Flask-CORS handles this automatically

Architecture

```
User → Browser/PyWebView → neo_chat.html → Fetch API → Flask Server
                                                          ↓
                                                    launcher.py
                                                          ↓
                                                    FundiBrain.respond()
                                                          ↓
                                                    LocalLLM → Groq → OpenRouter → Ollama
```
